PROJECTS

E-commerce website

Technologies used: Java,HTML,CSS, JavaScript,Bootstrap.

- This web application provides a platform for online shopping and provides login for users. This website provides a user friendly interface so that any users can easily use this website.
- This website is all about selling attire dresses, electronic devices, and laptops.

Prevention of Phishing Website

Technologies used: HTML,CSS, JavaScript, Python.

- This project provides a platform for online banking transactions in a safe and secure way. This project uses the image based Steganography technology to conceal the user credentials by hidden image to avoid vulnerable attacks.
- while registration and login user has to hide same secret image in cover image and then application will extract hidden images from login and database image to perform user validation. After successful user has to validate himself via OTP which is sent to email.
